Interactive Whiteboards and Digital Projectors

Interactive Whiteboards

Interactive whiteboards (IWB) use touch detection for user access in the same way as a mouse/scroll pad is used for computer input. The digital screen of the IWB allows images from a computer to be displayed on the board. Users can use finger touch or a supplied pen (stylus). The IWB allows teachers to run a lesson from one large, visible focal point.

Most teachers understand the “why” but struggle with the “how”. Here are some ideas on how you can use an IWB.

- Use it as a tool for note-taking. Students can come and write important points on the board. Alternately, teachers can appoint a student to type out notes on the computer while they talk, so that the other students can view and take them down.
- Teachers can ‘brainstorm’ ideas with their students in the classroom. They can put together text/ideas as well as images, diagrams or videos.
- Classroom games can be played on the board. Board games in particular can be played on the board itself.
- All forms of media– videos, photographs, graphs, maps, illustrations, games, etc. – can be used on the board, making it dynamic in nature. This expands the range of content that teachers can use for presenting new information.

SMART is a brand of interactive whiteboard but there are a number of different companies offering a similar technology and experience. The videos below take you through the basic steps of using a SMART brand board. The details and the connectors may vary depending on the brand and the model used.

Note: Please ensure that schools have provided permission before using the interactive whiteboard. It is recommended that the classroom teacher provides a brief tutorial before using the IWB.

How to use the Smart Board

Digital Projector

A digital projector is an electronic device that is capable of connecting to a computer or other device and projecting the video output onto a screen or wall. Digital projectors can be either fixed onto the ceiling, placed on a stand or can even be portable. Digital projectors are used in classroom teaching.
